Examples

The Examples are intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds. The Examples assume that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Examples also assume that your investment has a 5% return each year and that the Fund's operating expenses stay the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	Class A	Class B	Class C	Advisor Class	Class R	Class K	Class I
After 1 Year	\$ 514	\$ 467	\$ 263	\$ 61	\$ 128	\$ 95	\$ 57
After 3 Years	\$ 703	\$ 617	\$ 505	\$192	\$ 400	\$ 296	\$179
After 5 Years	\$ 907	\$ 892	\$ 871	\$335	\$ 692	\$ 515	\$313
After 10 Years	\$1,497	\$1,570	\$1,900	\$750	\$1,523	\$1,143	\$701

You would pay the following expenses if you did not redeem your shares at the end of period:

	Class B	Class C
After 1 Year	\$ 167	\$ 163
After 3 Years	\$ 517	\$ 505
After 5 Years	\$ 892	\$ 871
After 10 Years	\$1,570	\$1,900

Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys or sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These transaction costs, which are not reflected in the Annual Fund Operating Expenses or in the Examples, affect the Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 42% of the average value of its portfolio.

PRINCIPAL STRATEGIES

The Fund pursues income opportunities from government, corporate, emerging market and high-yield sources. It has the flexibility to invest in a broad range of fixed-income securities in both developed and emerging market countries. The Fund's investments may include U.S. and non-U.S. corporate debt securities and sovereign debt securities. The Fund may invest, without limitation, in either U.S. Dollar-denominated or non-U.S. Dollar-denominated fixed-income securities.

The Adviser selects securities for purchase or sale based on its assessment of the securities' risk and return characteristics as well as the securities' impact on the overall risk and return characteristics of the Fund. In making this assessment, the Adviser takes into account various factors, including the credit quality and sensitivity to interest rates of the securities under consideration and of the Fund's other holdings.

The Fund may invest in debt securities with a range of maturities from short- to long-term. Substantially all of the Fund's assets may be invested in lower-rated securities, which may include securities having the lowest rating for non-subordinated debt instruments (*i.e.*, rated C by Moody's Investors Service ("Moody's) or CCC+ or lower by Standard & Poor's Ratings Services ("S&P") and Fitch Ratings ("Fitch")) and unrated securities of equivalent investment quality. The Fund also may invest in investment grade securities and unrated securities.

The Fund may invest in mortgage-related and other asset-backed securities, loan participations, inflation-protected securities, structured securities, variable, floating, and inverse floating rate instruments and preferred stock, and may use other investment techniques. The Fund may also make short sales of securities or maintain a short position. The Fund may use borrowings or other leverage for investment purposes. The Fund intends, among other things, to enter into transactions such as reverse repurchase agreements and dollar rolls. The Fund may invest, without limit, in derivatives, such as options, futures, forwards, or swap agreements.

PRINCIPAL RISKS

- **Market Risk:** The value of the Fund's assets will fluctuate as the stock or bond market fluctuates. The value of its investments may decline, sometimes rapidly and unpredictably, simply because of economic changes or other events that affect large portions of the market.
- **Interest Rate Risk:** Changes in interest rates will affect the value of investments in fixed-income securities. When interest rates rise, the value of investments in fixed-income securities tends to fall and this decrease in value may not be offset by higher income from new investments. Interest rate risk is generally greater for fixed-income securities with longer maturities or durations.

Bar Chart

The annual returns in the bar chart are for the Fund's Class A shares and do not reflect sales loads. If sales loads were reflected, returns would be less than those shown.

Best Quarter was up 23.96% in the 2nd quarter, 2009; and Worst Quarter was down -17.75% in the 4th quarter, 2008.
